EDITORIAL ARTICLE

- Choosing the right stimulation protocol for in vitro fertilization-embryo transfer in poor, normal, and hyper-responders** 313
 J.H. Check, B. Slovis - *Camden, NJ (USA)*
 Various factors need to be considered before choosing a mild vs normal ovarian hyperstimulation protocol for IVF-ET.

ORIGINAL ARTICLES

Reproductive Biology Section

- Evaluation of the importance of late follicular phase endometrial echo patterns and pregnancy outcome following embryo transfer by evaluating infertile donor/recipient pairs** 318
 J.H. Check, J.K. Choe, J. Amui, D. Brasile, T. Jamison - *Camden, NJ (USA)*
 The triple-line pattern in late follicular phase may allow a better pregnancy rate for donors but not recipients.

- Blastomere number and pregnancy rates in the succeeding in vitro fertilization cycle in women who formed all embryos with ≤ 5 blastomeres** 320
 J.H. Check, J. Amui, J.K. Choe, D. Brasile, R. Cohen - *Camden, NJ (USA)*
 Most women demonstrating all embryos with slow cleavage in one transfer will have embryos with better cleavage rates in the next cycle but those who do not, will usually not conceive.

- Effect of serum progesterone level on the day of human chorionic gonadotropin injection on outcome following in vitro fertilization-embryo transfer in women using gonadotropin releasing hormone antagonists** 322
 B. Katsoff, J.H. Check, C. Wilson, J.K. Choe - *Camden, NJ (USA)*
 Serum progesterone level on the day of hCG injection does not influence pregnancy rates in IVF-ET cycles using GnRH antagonists.

- Effect of multiple source vs single source of donor embryos on pregnancy and implantation rates per transfer** 324
 C. Wilson, J.H. Check, J. Amui, J.K. Choe, D. Brasile - *Camden, NJ (USA)*
 Choosing donated embryos from multiple sources is associated with similar pregnancy rates as from a single source even though a higher percentage of the embryos are de-selected.

- Evidence that the main adverse effect of ganirelix on pregnancy and implantation rates is on the embryo rather than the endometrium** 326
 J.H. Check, R. Cohen, J. Amui, J.K. Choe, D. Brasile - *Camden, NJ (USA)*
 For unknown reasons, the GnRH antagonist ganirelix seems to have a direct adverse effect on the ability of an embryo to implant since both fresh and frozen embryos are affected.

- Successful twin pregnancy in a donor oocyte recipient despite a maximum endometrial thickness in the late proliferative phase of 4 mm** 328
 J. Amui, J.H. Check, R. Cohen - *Camden, NJ (USA)*
 A case is presented of a successful pregnancy though complicated by HELLP syndrome in a 47-year-old donor oocyte recipient despite a maximum endometrial thickness of 4 mm.

 J.H. Check, R. Cohen - *Camden, NJ (USA)*
 A live fetus resulted from IVF-ET despite poor endometrial thickness in a woman complicated by oocyte depletion.

- Speculum retention during embryo transfer does not improve pregnancy rates following embryo transfer - a randomized study** 333
 J. Amui, J.H. Check, D. Brasile - *Camden, NJ (USA)*
 Theoretically retention of the speculum for seven minutes following embryo transfer will help prevent expulsion of embryos but this randomized study failed to show a benefit.
- Successful pregnancy following a single fresh embryo transfer in a 45-year-old woman whose early follicular phase serum follicle stimulating hormone was 29 mIU/ml** 335
 J.H. Check, J.K. Choe, R. Cohen - *Camden, NJ (USA)*
 The first case of a successful pregnancy following in vitro fertilization-embryo transfer in a 45-year-old woman with a day 3 FSH > 15 mIU/ml is reported.

- Clinical effects of transvaginal vesicovaginal fistula repair surgery mediated by the Foley catheter (64 cases)** 360
 L. Bing-shu, H. Li, W. Qin, H. Min, C. Yan-xiang - *Hubei, CHINA*
 Vesicovaginal fistula repair with a Foley catheter is superior with respect to surgical treatment as the operation is shorter, there is less blood loss and higher success rate.
- Evaluation of clinical and cytogenetic findings on 1,068 second-trimester amniocenteses in Southeast Turkey** 364
