**EDITORIAL ARTICLES**

- Advances in oocyte cryopreservation - Part I: slow cool rapid thaw technique** 237  
 J.H. Check - *Camden, NJ (USA)*  
 Fertilization by intracytoplasmic sperm injection and use of sodium depleted choline substitute culture media has allowed successful pregnancies from the fertilization of frozen oocytes using slow-cool methodology.
- Regulatory mechanism of *Bcl-2* in uterine leiomyomas** 240  
 N. Ohara - *Kobe, JAPAN*  
 The regulatory mechanism of *Bcl-2* in uterine leiomyomas is described.

**REVIEW ARTICLES**

- High-grade cervical intraepithelial neoplasia, human papillomavirus and factors connected with recurrence following surgical treatment** 242  
 M.C. Ramos, B.H. Pizarro De Lorenzo, M.A. Michelin, E.F.C. Murta - *Uberaba, MG, BRAZIL*  
 Surgical margins, mitoses, methylated genes, HPV18 and local CD3 T lymphocytes are related with recurrence of CIN after surgical treatment.
- Human papilloma virus in adolescence** 248  
 P. Christopoulos, K. Papadias, K. Panoulis, E. Deligeoroglou - *Athens, GREECE*  
 Basic and advanced knowledge of HPV and guidelines need to be focused on adolescents, as they form a group of special interest with different needs.

**ORIGINAL ARTICLES****Reproductive Biology Section**

- Correction of failed fertilization despite intracytoplasmic sperm injection with oligoasthenoteratozoospermia but with acrosomes present by oocyte activation with calcium ionophore - case report** 252  
 J. Pinto, J.H. Check - *Camden, NJ (USA)*  
 Artificial oocyte activation by calcium ionophore can result in fertilization and embryo transfer using sperm with acrosomes present previously but failing to fertilize eggs despite intracytoplasmic sperm injection.
- Early endometrial changes following successful implantation: 2 and 3-dimensional ultrasound study** 255  
 E. Zohav, I. Bar-Hava, S. Meltzer, J. Rabinson, E.Y. Anteby, R. Orvieto - *Beer Sheva, ISRAEL*  
 During an IVF cycle the dynamic changes in endometrial thickness and volume between day of ET and two weeks later may predict IVF treatment outcome.

**General Section**

- Increased expression of GRP94 protein is associated with decreased sensitivity to adriamycin in ovarian carcinoma cell lines** 257  
 L.Y. Zhang, X.C. Zhang, L.D. Wang, Z.F. Zhang, P.L. Li - *Harbin, CHINA*  
 High basal level of GRP94 is correlated with an obvious decrease in sensitivity to adriamycin in the HO-8910PM cell line.
- Role of dietary habits on fetal anomaly development: Review of 315 consecutive fetal anomaly cases** 264  
 F.B. Cebesoy, O. Balat, E. Dikensoy, M.G. Ugur, I. Kutlar, H. Kalayci - *Gaziantep, TURKEY*  
 Dietary habits such as excess tea, chili peppers, and barbecued meat consumption may have an important role in development of fetal anomaly.
- Non classical congenital adrenal hyperplasia due to 21-hydroxylase deficiency in families from a Greek island with a closed society** 267  
 E. Trakakis, A. Chryssikopoulos, G. Basios, P. Trompoukis, A. Sarandakou, M. Spyropoulou, E. Salamalekis, P. Karanikolopoulos, G. Salamalekis, P. Skarpas, D. Kassanos - *Athens, GREECE*  
 Young members of a closed Greek island society presented hormonal findings of 21-hydroxylase deficiency. The proposed Marina index aims to classify the disease severity.
